

ABSTRACT OF THE DISCLOSURE

A corner mounted indirect lighting fixture which is to be mounted flush against the vertical walls of a corner of a house or building. The lighting fixture has a fixture housing which has a hook mounted on its exterior surface which is to engage with an engaging edge of a mounting bracket that is mounted at the corner formed by the vertical walls. The lighting fixture has an open top and a light diffusing plate at a bottom edge. A lamp is mounted to the fixture housing and extends within an internal chamber defined by the fixture housing. A translucent shade is attached to the fixture housing and defines the front wall surface of the internal chamber with a soft glowing light to be emitted outwardly therethrough.
